58. Penderi Cliffs

Between Llanrhystud and Monk's Cave, Ceredigion

Grid	O.S. Explorer map 213 Aberystwyth & Cwm Rheidol. Main entrances:	
References	SN554739 & SN552734, Site centre: SN553736	
Status	Notified SSSI.	
Tenure	The freehold of the northern half of the SSSI was purchased in 1966 with	
	grant aid from WWF and forms the reserve. The cliffs and scree below the	
	grazing line to the south of this have been leased since 1977, with other	
	sections being privately owned.	
Size	23 ha (56.8 acres).	
Location and	Access from the A487. Parking in a layby is 4.25 km from Llanrhystud	
Access Notes	(room for up to 8 cars). Path from 50 m south of layby at SN559731, for 1	
	km to stile entry, through fields to south of farm buildings. Alternatively	
	take the coast path, with many access points from the A487. The site can be	
	well observed from the coast path. Beware steep cliffs. Not accessible to	
	wheelchairs.	
Public	The X50, 554 from Aberystwyth or Aberaeron pass the layby; the 540,	
Transport	T1/740 also travel along the coast road	

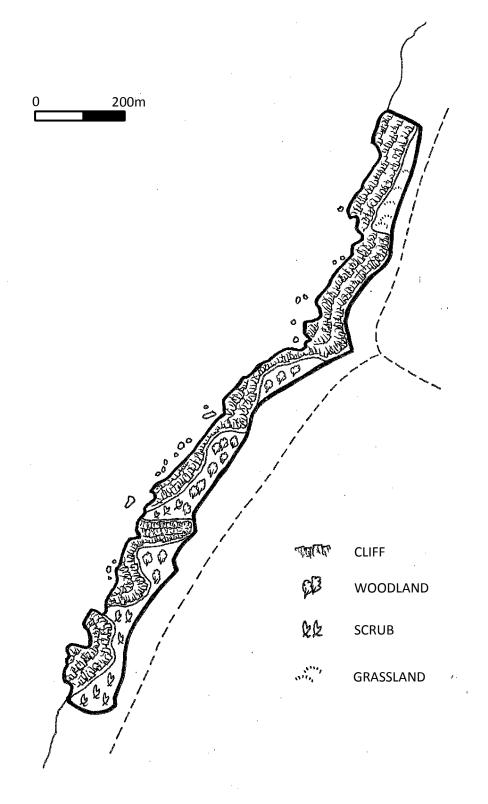

Description: Maritime cliff and slope, upland Oak woodland and lowland heathland.

Nearly 2 km of cliffs are contained within the reserve, with unique cliff scrub of Small-leaved Lime (Tilia cordata) and coves. The principal biological interest of this site is the steeply west-facing Sessile Oak woodlands, which include an interesting assemblage of other native species such as Blackthorn, Hawthorn, Hazel, Small-leaved Lime (particularly in the south and in the Great Gulley), Spindle at the north end, Rowan, and Wych Elm.

The spring flora includes Dog's Mercury (2-4), Enchanter's Nightshade (6-9), Herb Bennet (5-10), Wood Anemone (3-5), and Wood Sorrel (3-6). Scree areas carry a flora of spring and early summer annuals with a few short-lived perennials, while the deep gulleys have a few ferns. The cliffs have maritime and heath flora, which brings the total plant list to around 130 species. There is a rich lichen flora but few bryophytes though Schistostega pennata has been found in rabbit holes at SN547729.

Birds include most common woodland species in addition to which Chough, Buzzard, Kestrel and Raven nest fairly regularly, and Peregrine are often seen. Over 1000 pairs of Cormorant nested in 1981. In 2005 there were 46 breeding pairs of Herring Gull, 1 of Great Black-backed Gull, 6 of Fulmar and 1 of Shag. Common small passerines can also be seen as well as Whitethroat, Wheatear, Stonechat and Linnet.

Rock platforms in the southern section provide at low water a convenient hauling-out site for moulting Grey Seal with over 30 seen during March and April. Young Seals are occasionally born on the reserve and Bottlenose Dolphins seen out to sea.

Management objectives: Principally

safeguarding of the unique woodland/scrub interest and monitoring of the breeding birds

Good times to visit		
Mar-Apr	Moulting grey seals at low tide	
Mar-Jun	Woodland flowers	
May-Jul	Breeding seabirds	
Jun-Oct	Ferns, bryophytes and lichens
